

Objectives to Work on Before Next Meeting

Mechanical Engineering - Pep, Roshan, Lily

1.0 - Designing Parts

- 1.1 - Pep: Main Frame Design start work on this
- 1.2 - Roshan: Edit the gear teeth, smaller drive gear to increase our torque
- 1.3 - Lily: The servo holder, design the holder that is the dimensions of the servo, that basically just has a bottom/top plate for the servo to rest on, and then the rest of the servo is fit snug in the actual "tray."

Deliverable: Next meeting test with actual battery connection since we will have new connectors hopefully

Software & Electrical - Ayaam & Vivienne

1.0 - Look into how to run the servos off this and test them, so we can then test our gear mechanism. Look into this vehicle design's exact support for flight, and then also look at the sensor calibration for this.
